DETAILED ACTION

Drawings

- 1. Figures 1 and 2 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.121(d)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.
- 2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the flow sensor means and mass flow rate measurement means must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement

Art Unit: 2855

Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claims 1,2,4 and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Yeh (4,932,788). Yeh teaches a mass flow measuring device comprising an evaporator/calorimeter (9) having a housing (4) defining a flow path, an inlet plenum (45) communicating with the evaporator (9) for receiving inlet gases, liquids, or a mixture of gases and liquids flowing along respective inlet flow paths, electric heater means (19) provided coaxially in the evaporator (9) flow path for heating gases, liquids and gas liquid mixtures passing through the evaporator (9), an outlet (46) for discharging a heated gas and liquid evaporant mix, an electric sensor means (18) connected to the electric heater means (19) for measuring heater energy consumption with respect to a predetermined amount of gas and liquid evaporant mix (Col. 5, lines 3-6)(Fig.1), a flow sensor means for measuring respective flow rates of inlet gases, liquids and mixtures corresponding to the predetermined amount of gas and liquid evaporant (Col. 5, line 68- Col.6, line 6), temperature sensor means (8) provided centrally in the respective inlet flow paths (45) for directly measuring temperatures of the corresponding amount of inlet gases, liquids and

Application/Control Number: 10/619,683 Page 4

Art Unit: 2855

mixtures, temperature sensor means (11) provided centrally in the outlet (46) for directly measuring the temperature of the discharged gas and liquid evaporant mix and a mass flow rate measurement means (14) responsive to the electric sensor means, flow sensor means and temperature sensor means for determining mass flow based on precise measurement of inlet flow

Claim Rejections - 35 USC § 103

rates, inlet and outlet temperatures and energy absorbed during heating (Col. 5, lines 14-55).

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Yeh in view of Viegas et al. (5,598,709)(hereinafter Viegas). Yeh teaches a mass flow measuring device but lacks teaching one or more diversion fins provided in the evaporator housing. Viegas teaches one or more diversion fins/helical coils (50,52,54) provided in an evaporator housing (56)(Fig.2). It would have been obvious to one of ordinary skill in the art to modify Yeh to include diversion fins as taught by Viegas in order to more clearly indicate the flow patterns of the fluid and to achieve an advantageous compactness (see Viegas; Col. 5, lines 7-13).

Conclusion

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Takisha Miller whose telephone number is (571) 272-2184. The examiner can normally be reached on Monday - Friday (7:00 am - 3:30 pm).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Edward Lefkowitz can be reached on (571) 272-2180. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
